SUMMARY

Computer Science undergraduate (CGPA: 8.98) with strong foundations in Python, Java, and Data Structures & Algorithms. Hands-on experience developing backend applications using Spring Boot, REST APIs, MySQL, and JWT-based authentication. Familiar with Generative AI concepts, including Retrieval-Augmented Generation (RAG) pipelines. Seeking an AI/Software Engineering Internship to apply problem-solving skills and build practical technology solutions.

SKILLS

Programming: Python, Java
Backend & Security: Spring Boot, REST APIs, JWT Authentication
Databases: MySQL
Core CS: Data Structures & Algorithms (practice on CodeChef, Codeforces, Smart Interviews), OOP, DBMS, Operating Systems
Tools: Git, GitHub
Generative AI: RAG, Embeddings

EDUCATION

KL University, Vijayawada, India Expected 05/2028
B.Tech, Computer Science & Engineering | GPA: 8.98

Narayana Educational Institution, Guntur 04/2024
Intermediate Certificate (MPC) | GPA: 96.4%

St. Luke's School, Guntur 05/2022
Secondary School Certificate (SSC) | GPA: 83%

PROJECTS

The Chakra: AI-Weighted Career Assessment & Mentorship Platform 2025 – 2026
Spring Boot, REST APIs, MySQL, JWT, React, Railway
GitHub: The-Chakra-Backend, The-Chakra-Frontend

- Contributed to a full-stack career assessment and mentorship platform (React frontend, Spring Boot backend), focusing on backend and database engineering.
- Developed Spring Boot REST APIs and backend services for student management, audit logging, and system health monitoring.
- Designed MySQL database structures for student profiles, assessments, mentor-task workflows, and administrative data.
- Implemented JWT (HS512) authentication and authorization, plus OTP-based verification with encrypted OTP storage, expiration, and one-time use.
- Deployed and managed the MySQL database on Railway.

Document Q&A System using Retrieval-Augmented Generation (RAG)
Python, Embeddings, Vector Database, LLM

- Designed a RAG pipeline: document ingestion → chunking → embeddings → vector database → similarity retrieval → LLM response generation.
- Implemented document ingestion and chunking to prepare source documents for retrieval.
- Generated embeddings and stored them in a vector database for similarity-based retrieval.
- Integrated retrieval with LLM-based response generation so answers draw on retrieved document context.

LANGUAGES

Telugu (Native), English (B2 – Upper-Intermediate)
